🎓 EDUCATION

A2SV,
Data Structure And Algorithm Course
02/2023 – present

Addis Ababa University,
Bachelor of Computer Science
2019 – 2023

💼 PROFESSIONAL EXPERIENCE

Across Express, Frontend Developer
05/2022 – 10/2022

RDX Delta rabbit, Frontend Developer
01/2023 – 06/2023

🧠 SKILLS

- React
- Next Js
- Tailwind css
- Java Script
- Git
- Figma
- Frappe and Erpnext
- HTML
- CSS
- Node js
- Python
- C++

📇 PROFILE

I am a computer science graduate with strong problem-solving abilities. I thrive on tackling challenges, finding innovative solutions, and collaborating effectively with teams to achieve remarkable results.

📁 PROJECTS

ECX, Web Developer
At Across Express, I made substantial contributions to the Ethiopia Commodity Exchange (ECX) portal. Using ERP Next, React, and Next.js, I implemented UI components that enriched data visualization, including interactive charts for daily exchange data and bid form trends. I contributed to team efforts, upholding high code quality through reviews, and significantly optimizing load times for an enhanced user experience. Moreover, I proposed and implemented innovative solutions that measurably improved user engagement and data analysis capabilities within the portal. These achievements underscore my commitment to delivering impactful solutions that elevate user experiences.

Gagarian Project, Frontend Developer
During the ICOG Hackathon, my team built a local food e-commerce site using React and Django. As the front-end developer, I ensured an engaging user interface, contributing to our second-place finish. I prioritized responsive design and collaborated with backend developers. This showcased my coding, teamwork, and project management skills.

Education Portal, UI/UX designer and Frontend Developer
As a UI/UX designer and frontend developer at RDX, I shaped the Education Portal using Figma and React. My role involved crafting intuitive interfaces and seamlessly integrating them with the frontend. By combining design expertise with React proficiency, I contributed to an enhanced user experience and a visually appealing platform.

No Stock portal, UI/UX designer and Frontend Developer
In my capacity as a UI/UX designer and frontend developer at RDX, I was instrumental in creating the No-stock portal, an e-commerce platform connecting merchants, customers, and delivery services. Utilizing Figma and React, I designed user-friendly interfaces and seamlessly integrated them into the frontend. Through innovative design solutions and technical proficiency, I played a vital role in developing a functional and compliant platform.

Kebele Management System, Frontend Developer
In my university's final year project, I excelled as both the front-end developer for a Kebele Management System. Leveraging React, Next.js, and Node.js, I implemented intricate user interfaces that contributed to the system's visual appeal and usability.

Tour and Travel website, Frontend Developer and Team lead
As the team lead for a class project, I spearheaded the development of a "Tour and Travel" website using HTML5, CSS3, JavaScript, and PHP technologies. In this role, I provided direction, coordinated team efforts, and ensured the successful integration of these technologies. Moreover, I actively contributed as a frontend developer, crafting the user interface and optimizing the overall user experience of the website.

Online Shopping, Frontend Developer
I independently embarked on a personal project to create an Ecommerce Website for online shopping. Using pure HTML5, CSS3, and JavaScript, I designed a user-friendly platform that enables seamless online shopping experiences. This project showcases my skills in frontend web development and my ability to create functional and engaging digital interfaces.

Employment and Student Management System
I designed an Employment and Student Management System using C++ for a school project with my team. This system efficiently handles employee information, showcasing my programming skills and practical problem-solving abilities.
